

Components

- 1 Components are very useful in large and very large projects. Components allow you to make lots of changes very fast.
- 2 In general, you should add an Auto-layout (Shift+A) then you should transform that item to a component.

- 3 The original component is called a Master Component

❖ this is a master component

Any changes you make to it will be spread across all the instances (clones)

- 4 It's best to place the original component in a separate place in the project and add clones through the Assets Panel
- 5 Can't find the Master Component?
Use this button that's available on any instance.
