

# How to solve the first exercise – Cheat Sheet

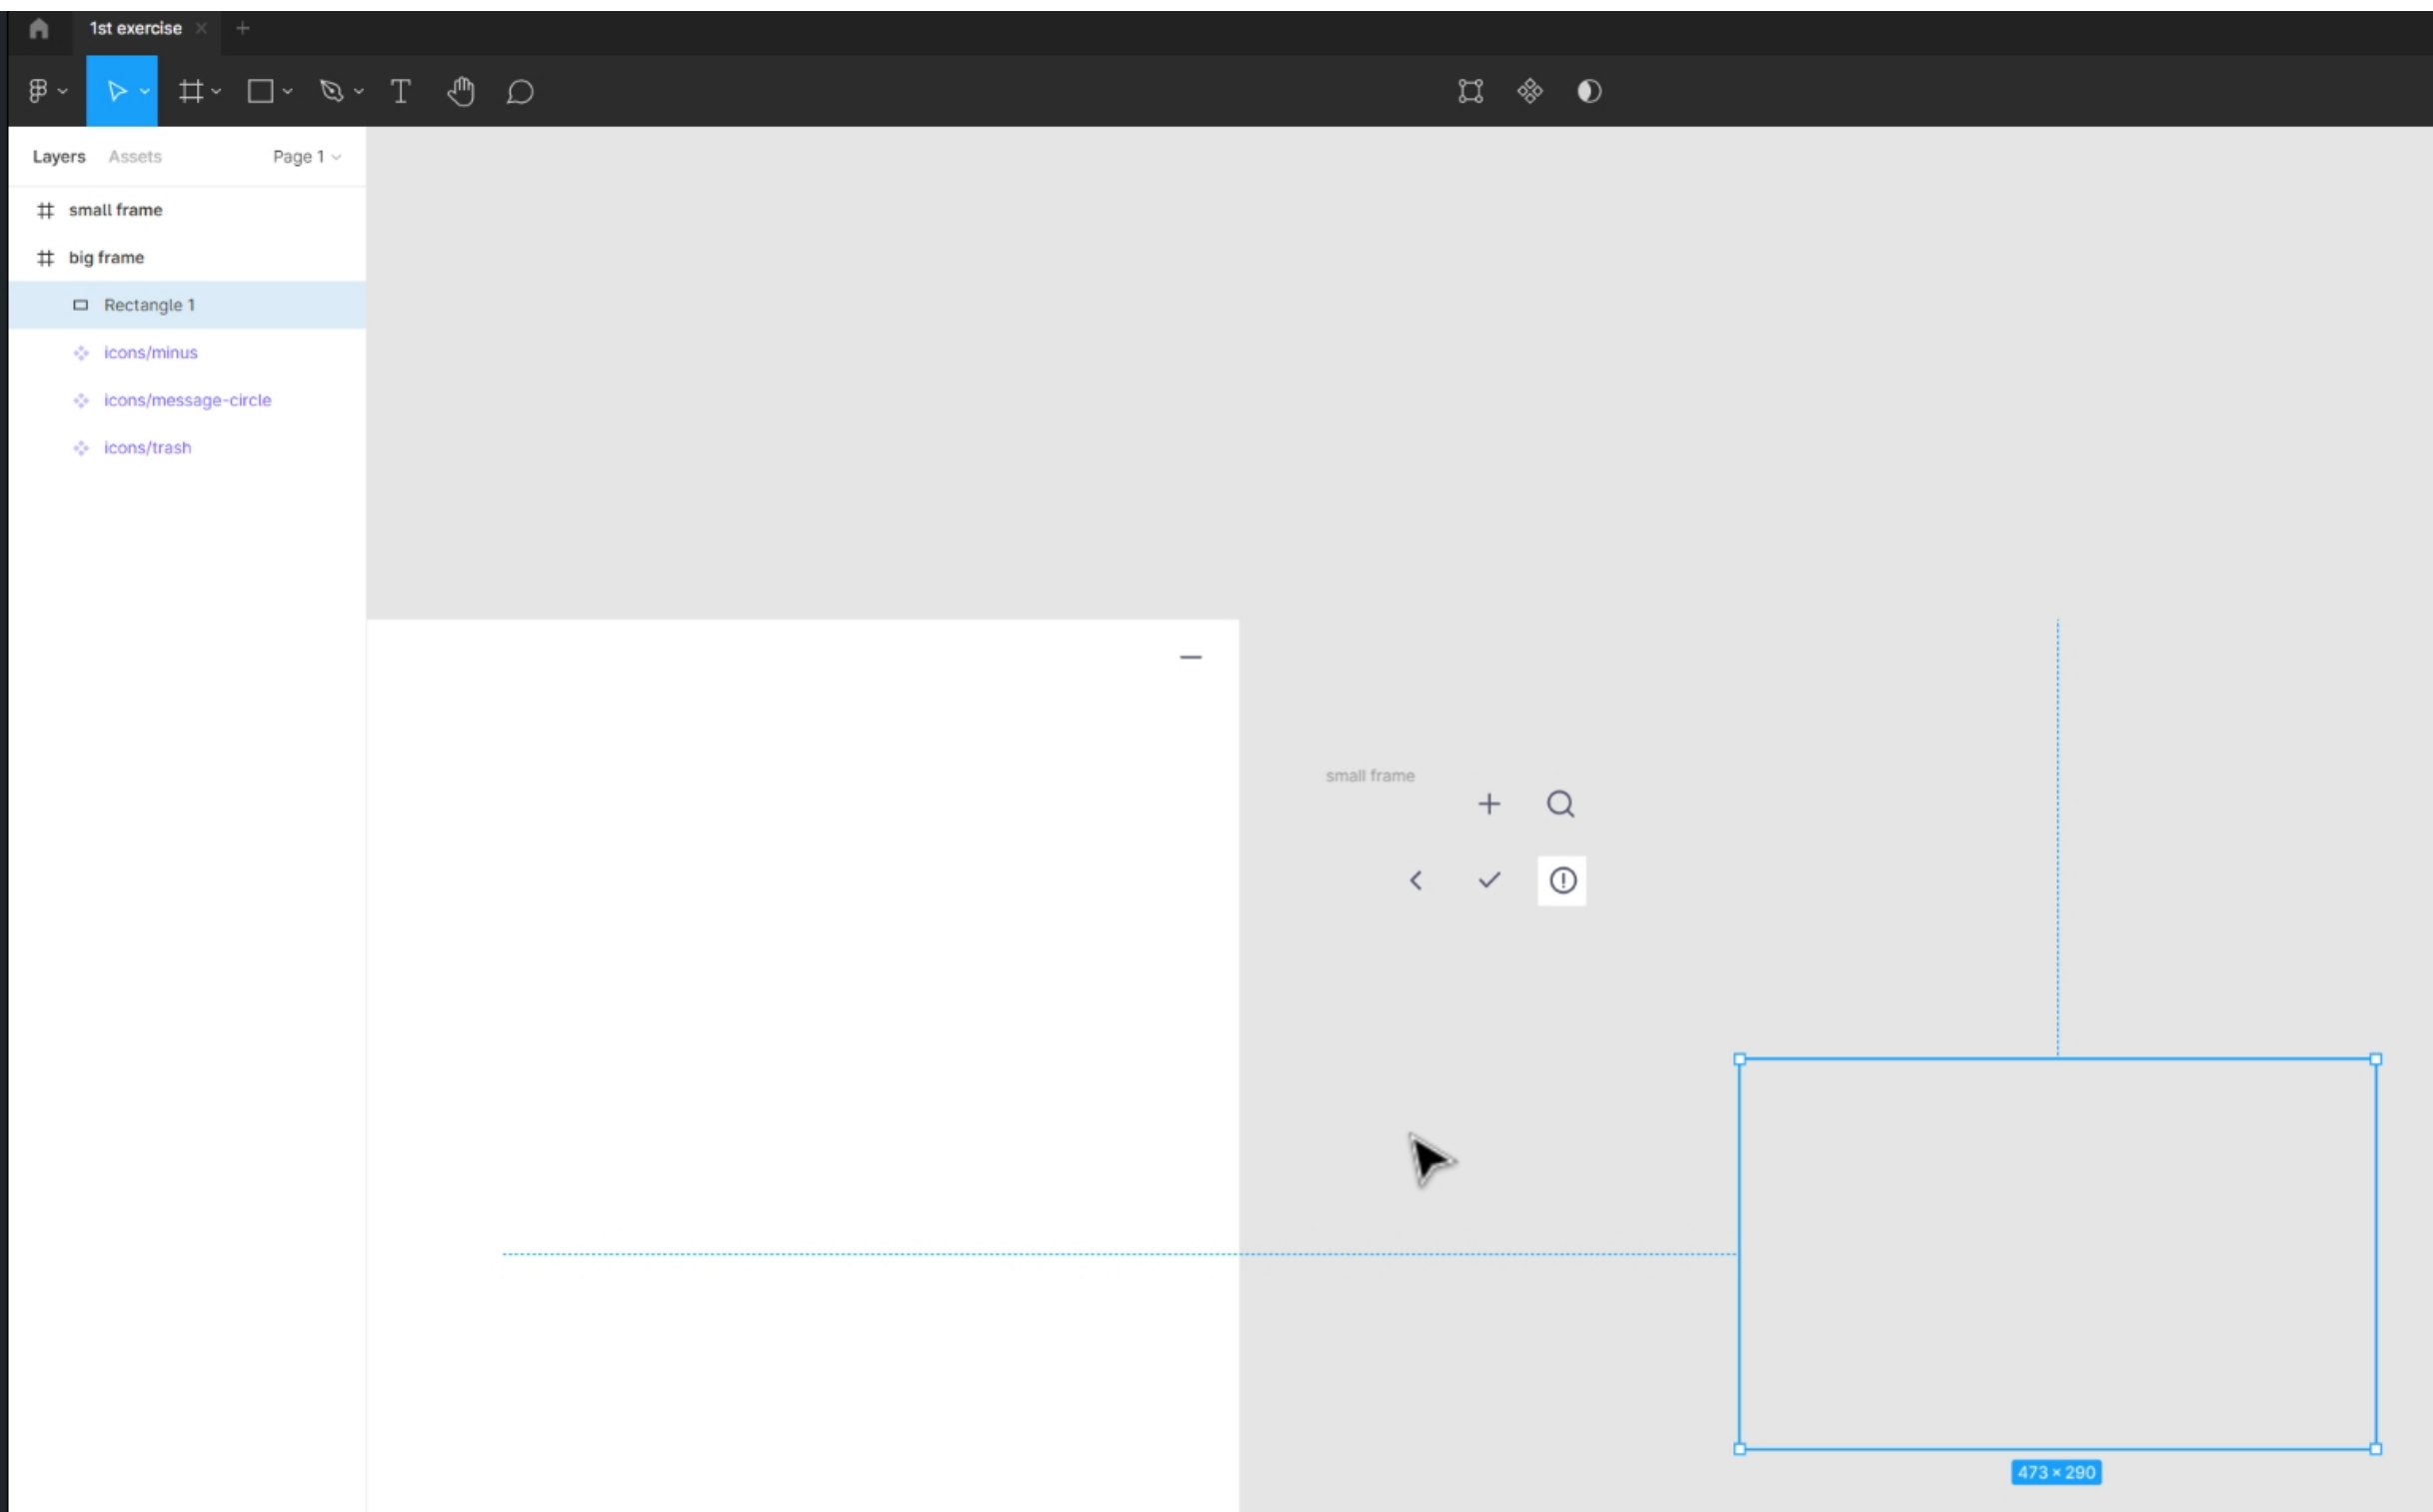

1 Select multiple layers by dragging out a box

2 If your box is too big, you'll select the entire frame

3 If you move an item from the layers panel, it won't move on the canvas!

Rectangle 1 was move **through the layers panel** to 'big frame', but notice it's **outside** the frame!  
You have to move it: a) manually, drag and move it; b) use the alignment tools

4 If you have **two or more** items selected, the alignment tools will reposition them **between themselves!** Not based on the frame!

## How to solve the first exercise – Cheat Sheet

5 To select "icons/warning" that's inside "frame 2" you must:

- 1) click once above the icon to select "frame 2";
- 2) double-click above the icon to select "icons/warning".
