

How you create buttons in Figma

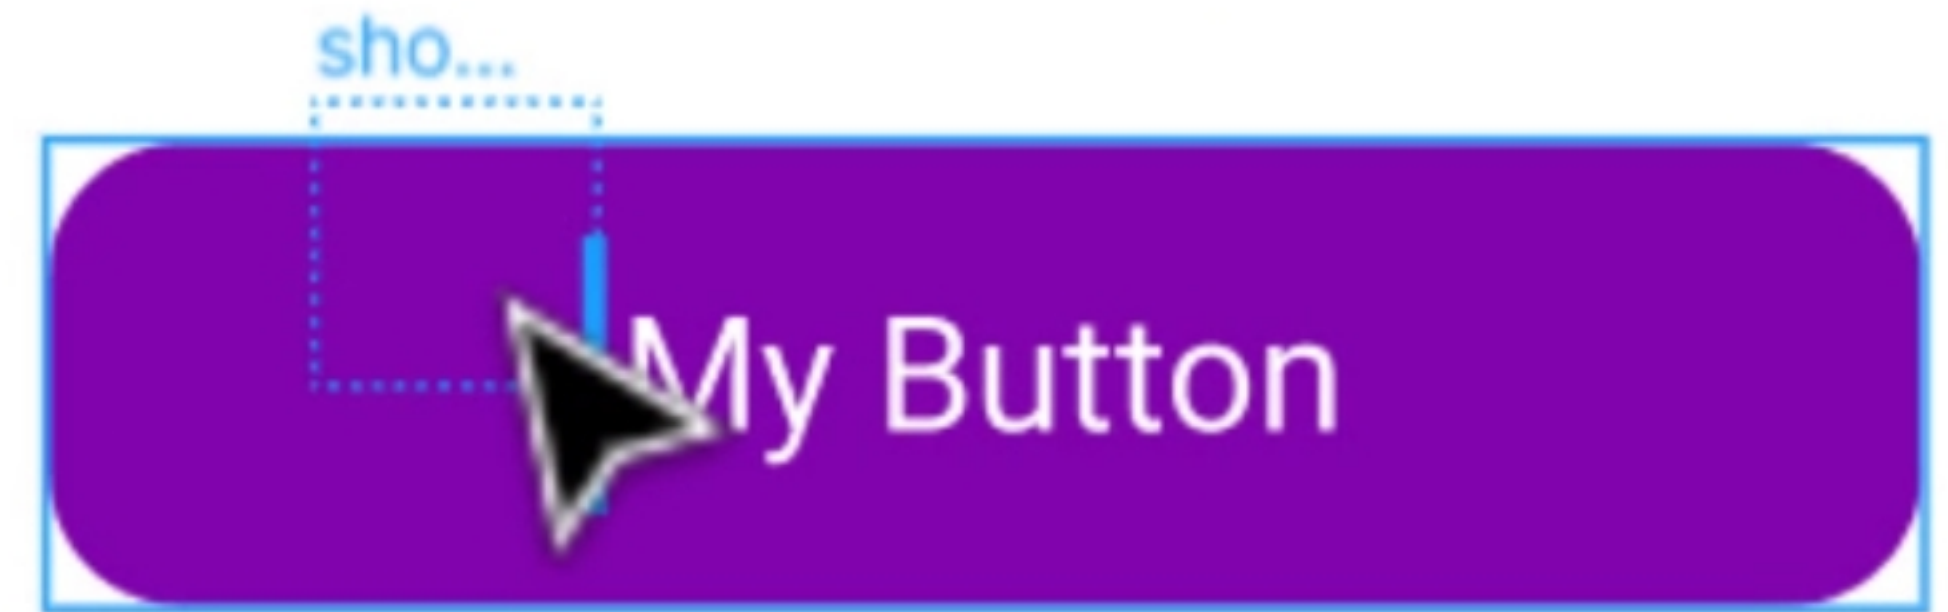

- 1 Start with a text layer then use Shift+A (auto-layout)
- 2 Add a fill from the panel on the right
- 3 Customize the padding (the empty space around the text) and the corner radius (the roundness of the button)

If your box is too big, you'll select the entire frame

- 4 In the picture above, the value '15' controls the distance between the text layer and any icon you may add next to it.

- 5 When you want to add an icon inside a button, use an SVG icon. Click, hold, and drag above the button until a blue line appears.

If the blue line doesn't appear, try again but **slower**.
