# Masking

1 Masking means hiding parts of a layer with another layer.
Another explanation: put an image inside any shape

The circle must be underneath the photo. Then use this icon (above) to create a mask.

2 "This is text" won't be visible because it's part of a mask.
If you don't want that, click it, and drag it underneath 'circle'.

3 Don't want to add layers to the mask by mistake? Select the layers from the mask and group them with Ctrl+G. Any new layers won't be added to that group by mistake!
